Integration Engineer

Have you been searching for a great professional development opportunity, working within a state of the art Software Development Center in a fast-paced global project? Then this could be the job for you!

This is an exciting time for Farfetch as we are experiencing a period of unprecedented growth. We are looking for an **Integration Engineer** to join our team.

We offer not only a dynamic, fun, challenging and multicultural workplace, but also conditions in accordance with experience level.

The Company
Farfetch is an innovative e-commerce company that brings the world's best fashion boutiques to an international audience. Launched in October 2008, Farfetch is rapidly growing into a truly global company. Our family now includes 900 talented people and 400 independent boutiques across Europe, North and South America, Asia, and offices in London, New York, LA, Porto, Guimarães, São Paulo, Tokyo, Shanghai and Moscow.

The Tech Team
Our Tech Team, based entirely in Oporto, Portugal, is formed by over 150 members, highly committed to turn the company into the leading global E-Commerce player in this market. We are constantly looking for world-class people to take on challenging roles to help us fulfil our potential – and you to fulfil yours.

The Role
Being part of our Integrations team, you will be responsible for managing and helping our partners to implement integrations processes with Farfetch. Furthermore, you will contribute to define and implement a sustainable strategy for integrations within Farfetch.

Responsibilities:

- Assist our partners on the best way to implement integration processes with Farfetch
- Work closely with the development team to improve our current integration API
- Improve documentation about our integration processes and workflows
- Be responsible for planning, development and troubleshooting
- Help to define best practices for the integrations processes
- Help to define the vision and strategy for integrations

Key skills and experience:

- Degree in Software Engineering or related field
- Proficiency in Microsoft C# or similar object oriented programming language
- Knowledge about software architecture
- Basic knowledge about SQL using Microsoft SQL Server or other relevant RDMS
- Ability to promote process improvement
- Problem solving attitude and experience in working closely with development teams
- Previous experience with software integration processes is a plus
- Previous experience in developing eCommerce sites is a plus
